

ONC-305-301

Analysis Data Reviewer's Guide

Mini ADRG-style guide for the simulated ADaM submission package

Item	Value
Sponsor	Simulated Sponsor Ltd.
Study phase	Phase III (simulated)
Investigational product	ONC-305 + standard of care
Control	Placebo + standard of care
Indication	Advanced/metastatic solid tumours
Document version	2.0
Generation date	2026-05-12
Data source	Fully synthetic patient-level data; no real patient data or clinical evidence

Confidentiality and simulation notice

This portfolio is a professional demonstration of clinical-trial statistics and statistical-programming capability. It is deliberately structured like a small sponsor/CRO submission package, but all data and conclusions are simulated and must not be interpreted as clinical evidence.

1. Purpose

This guide explains the simulated analysis datasets, derivation logic, metadata, traceability and known limitations. It is included because reviewer guides are a normal part of regulatory-style clinical data submissions and show that the portfolio is not just a collection of tables.

2. Dataset overview

Dataset	Submission-style role	Structure	Key variables	Why it matters
ADSL	Subject-Level Analysis Dataset	One record per subject	Treatment, demographics, strata, flags, exposure	ADSL for all population denominators
ADTTE	Time-to-Event Analysis Dataset	One record per subject per endpoint	PARAMCD, AVAL, CNSR, EVNTDESC, STARTDT, ADT	PFS/OS KM, log-rank and Cox analyses
ADRS	Response Analysis Dataset	One record per subject	BOR, ORRFL, DCRFL, BESTPCHG	ORR/DCR summaries and waterfall plot
ADAE	Adverse Event Analysis Dataset	One record per AE	AEBODSYS, AEDECOD, AETOXGR, AESER, AEREL, AEACN, AESDTH	TEAE incidence, seriousness, severity, discontinuation and fatal-event outputs
ADLB	Laboratory Analysis Dataset	One record per subject per lab parameter	BASEGR, WORSTGR, SHIFT	Laboratory grade-shift table

3. Data flow

Layer	Dataset	Rows	Variables	Purpose
Raw/simulated	DM	420	24	Demography, randomization, baseline and treatment dates
Raw/simulated	TTE	840	10	Progression-free survival and overall survival source
Raw/simulated	RS	420	6	Best overall response and tumor change source
Raw/simulated	AE	976	15	Adverse event source
Raw/simulated	LB	1680	7	Laboratory grade shifts source
ADaM-style	ADSL	420	33	Subject-level analysis dataset
ADaM-style	ADTTE	840	20	Time-to-event analysis dataset
ADaM-style	ADAE	976	24	Adverse event analysis dataset
ADaM-style	ADRS	420	15	Response analysis dataset
ADaM-style	ADLB	1680	11	Laboratory analysis dataset

4. Traceability matrix

Requirement	Analysis question	Document reference	Dataset/variables	Output	Program
Primary objective	Compare PFS	SAP Section 7.1	ADTTE PARAMCD=PFS	Table 14.2.1, Figure 14.2.1	programs/python/generate_tifs.py
Key secondary objective	Compare OS	SAP Section 7.2	ADTTE PARAMCD=OS	Table 14.2.2, Figure 14.2.2	programs/python/generate_tifs.py
Key secondary objective	Summarize ORR	SAP Section 7.3	ADRS ORRFL	Table 14.2.3, Figure 14.2.4	programs/python/generate_tifs.py
Safety objective	Summarize TEAEs	SAP Section 8	ADAE TRTEMFL/AOCCFL/AOCCSFL	Tables 14.3.1-14.3.5, Listings 16.2.2-16.2.3	programs/python/generate_tifs.py
Data standards	Document ADaM-style metadata	ADRG Section 4	ADSL/ADTTE/ADAE/ADRS/ADLB	define_like_metadata.xml, adam_spec.csv	programs/python/build_adam.py
QC objective	Confirm reproducibility and output completeness	Validation Report	All analysis datasets and outputs	qc/validation_checks.csv	programs/python/qc_validation.py

5. Metadata and limitations

- The analysis datasets are ADaM-style CSV files with define-like XML metadata. They are not official SAS XPT transport files in this executable environment.
- The synthetic data were generated for portfolio demonstration only and do not represent any real drug, patient or site.
- SAS and R skeletons are included for translation to a more conventional sponsor/CRO toolchain.
- All scripts are deterministic under the fixed seed and can be regenerated from the repository root.
