Blinded Data Review Memo

Mock pre-database-lock review artifact

Document	Blinded Data Review Memo	Study	ONC-305-301
Version	1.0	Status	Final simulated package
Data cut-off	2026-01-31	Database lock	2026-02-15
Author	Luke Johnston	Classification	Portfolio demonstration
Purpose	Biostatistics/statistical-programming portfolio	Data	100% simulated; no patient data

Important: this is a simulated portfolio package designed to demonstrate biostatistics, statistical programming, reproducibility, and regulatory-document writing. It is not a real clinical trial and is not clinical evidence.

Purpose

- Demonstrate awareness that statistical outputs are only credible after data review, endpoint rules and programming assumptions have been checked.
- Summarize data issues, endpoint conventions, protocol deviations and readiness for final TLF generation.
- In a real study this would be prepared before unblinding; this simulated package is already unblinded, so the memo is included as a workflow artifact only.

Data review issue log

Issue ID	Area	Issue	Observation	Resolution	Status
BDR-001	Data review	Missing response assessments	29 subjects have NE BOR by simulation design	Handled as NE; ORR denominator remains all FAS subjects	Closed
BDR-002	Endpoint	PFS censoring traceability	Subjects without progression/death censored at last adequate assessment	CNSR documented in ADTTE and SAP	Closed
BDR-003	Safety	AE dates relative to exposure	All TEAEs checked for chronology against treatment start/end	Automated chronology checks passed	Closed
BDR-004	Programming	TLF reproducibility	All outputs regenerated from a single run_all.py command	Manifest and validation tracker generated	Closed
BDR-005	Metadata	Reviewer traceability	Source-to-ADaM traceability matrix added	ADaM reviewer guide created	Closed

Database-lock readiness checklist

Checklist item	Status
Randomization and treatment-arm counts reconciled	Complete
FAS and Safety Set flags confirmed	Complete
PFS/OS endpoint records present for all subjects	Complete
AE chronology and toxicity-grade checks completed	Complete
Response categories mapped to ORR/DCR flags	Complete
ADaM metadata and define-like XML generated	Complete
TLF and validation package generated	Complete
