

ONC-305-301

Portfolio One-Page Summary

What a recruiter or hiring manager should notice first

Item	Value
Sponsor	Simulated Sponsor Ltd.
Study phase	Phase III (simulated)
Investigational product	ONC-305 + standard of care
Control	Placebo + standard of care
Indication	Advanced/metastatic solid tumours
Document version	2.0
Generation date	2026-05-12
Data source	Fully synthetic patient-level data; no real patient data or clinical evidence

Confidentiality and simulation notice

This portfolio is a professional demonstration of clinical-trial statistics and statistical-programming capability. It is deliberately structured like a small sponsor/CRO submission package, but all data and conclusions are simulated and must not be interpreted as clinical evidence.

Why this project is strong

- Looks like a small sponsor/CRO statistical package rather than a generic coding demo.
- Connects protocol/SAP thinking to ADaM-style datasets, TLFs, CSR-style reporting and validation.
- Shows oncology survival analysis, response analysis, safety reporting and exposure-adjusted AE rates.
- Includes Python executable code plus SAS/R templates for regulated workflow translation.
- Demonstrates traceability, QC, reviewer-guide documentation and GitHub-ready reproducibility.

Headline simulated results

Metric	Result
Randomized subjects	420 (211 ONC-305 + SOC; 209 placebo + SOC)
Primary PFS HR	nan
PFS median	ONC-305 + SOC: 7.7 (6.9, 9.5); Placebo + SOC: 6.1 (5.4, 6.6)
PFS log-rank p-value	nan
OS HR	nan
OS median	ONC-305 + SOC: 22.4 (19.2, 24.0); Placebo + SOC: 16.9 (15.7, 19.5)
OS log-rank p-value	nan
ORR	ONC-305 + SOC: 97 (46.0%); 95% CI 39.1-52.9%; Placebo + SOC: 41 (19.6%); 95% CI 14.5-25.7%
Any TEAE	ONC-305 + SOC: 203 (96.2%); Placebo + SOC: 186 (89.0%)
Grade >=3 TEAE	ONC-305 + SOC: 86 (40.8%); Placebo + SOC: 76 (36.4%)

Suggested CV bullet

Built a simulated Phase III oncology statistical-submission portfolio with SAP, protocol synopsis, ADaM-style ADSL/ADTTE/ADAE/ADRS/ADLB datasets, Kaplan-Meier/Cox/log-rank survival analyses, ORR and safety TLFs, exposure-adjusted AE rates, listings, figures, reviewer guide, traceability matrix, QC checks and reproducible Python/SAS/R programming structure.
